Two pounds for 100 feet of drill, 100 pounds in drills for an acre.

CULTURE—Peas come earliest to maturity in light, rich soil. For general crop, a deep loam or a soil strongly inclining to clay is best. For early crops, decomposed leaves or leaf-mold should be used; or, if the soil is very poor, strong manure may be used. For general crops a good dressing should be applied, and for the dwarf-growing kinds the soil can hardly be too rich. When grown as a market crop, Peas are never staked; for private use they are generally sown in double rows and the tall varieties staked up by bush. For an early crop, sow as soon as the ground can be worked, and make repeated sowings every two weeks in succession. After the first of June sowing should be discontinued until the middle of August when a good crop may sometimes be secured by sowing an extra-early sort for fall use.

Blondale Savoy-leaved—A heavy cropper, of fine quality and very hardy; succulent leaves, curled and crinkled like a Savoy cabbage; hardiest and most productive sort. 1 oz., 5c.; ¼ lb., 15c.; 1 lb., 35c.; 10 lbs., 25c.; 100 lbs., 17c.

Prickly or Winter—Very vigorous and hardy. 1 oz., 10c.; ¼ lb., 20c.; 1 lb., 50c.

TOBACCO SEED

One ounce will sow 25 feet square, and produce plants for one acre.

Fine Havana—Finest strain of imported seed. 40c. oz.

SQUASH

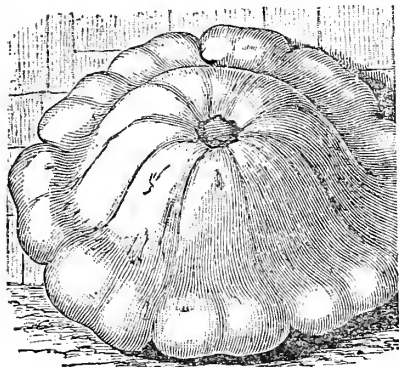

German, Kurbisz, Zucca, Miekuzr.

One ounce Early will plant 50 hills; one ounce Marrow, 25 hills.

CULTURE—The plants are very tender and sensitive to cold, and planting must be delayed until settled, warm weather. The general principles of culture are the same as those given for cucumbers and melons, but the plants are less particular as to soil. The summer varieties should be planted 4 feet apart each way and the winter sorts 8 feet. Three plants are sufficient for

Satterthwaite's Seed Store

a hill. Care should be taken not to break the stems from the Squashes intended for winter use, as the slightest injury will increase the liability to decay.

MAMMOTH WHITE BUSH SQUASH

Mammoth White Bush Scallop—Similar to Early White Bush, except that it is much larger. 1 oz., 15c.; ¼ lb., 35c.; 1 lb., \$1.00.

Giant Summer Crookneck—Double the size of the ordinary Crook-neck and very warty, but similar in other respects. Their handsome appearance commands an extra price in the market. 1 oz., 15c.; ¼ lb., 40c.; 1 lb., \$1.25.

Improved Hubbards—The well-known and standard late variety; our strain is excellent. 1 oz., 25c.; ¼ lb., 40c.; 1 lb., \$1.25.

Mammoth Yellow Bush Scallop—Same as White Bush except in color. 1 oz., 15c.; ¼ lb., 35c.; 1 lb., \$1.00.

Ford Hook—Skin bright yellow; flesh color; is very dry and sweet; one of the handsomest and best keeping winter varieties. 1 oz., 15c.; ¼ lb., 35c.; 1 lb., \$1.00.

Boston Marrow—Fine fall variety, oval bright orange; flesh yellow and firm; best for pies, and also for canning. 1 oz., 15c.; ¼ lb., 30c.; 1 lb., 95c.; 10 lbs., 85c. lb.

TOMATOES

German, Liepsafel, Pomo d'Ora, Pompidoro.

One ounce will produce 1,500 plants.

CULTURE—The Tomato is raised from seed, which should be sown in the hotbed about February 20, and continuous sowings made until April 1, according as the plants are wanted for use. When the plants are about 2 inches high, transplant to 4 inches apart, and after three or four weeks transplant from the hotbed into a cold frame, setting the plants 8 inches apart each way. (A cold-frame is simply a low wooden frame covered with glass used to protect such plants as are not sufficiently hardy to withstand our winters). Keep the plants cool, so as to make them stocky. Set out in the open ground about June 1, in well-enriched soil, setting the plants 5 feet apart each way.

Greater Baltimore—An excellent main-crop sort. Pkt., 10c.; 1 oz., 25c.; ¼ lb., 75c.; 1 lb., \$2.75.

EARLIANA TOMATO

Dwarf Champion—Distinction in foliage and habit of growth, being compact and upright. 1 oz., 30c.; ¼ lb., 85c.; 1 lb., \$3.50.

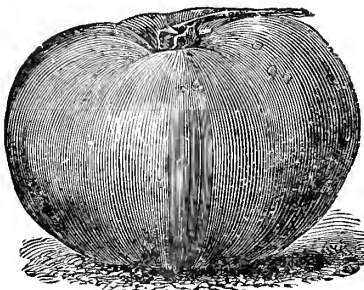

Earliana—New. Claimed to be the earliest; large, smooth, red; very prolific. 1 oz., 35c.; ¼ lb., 85c.; 1 lb., \$3.00.

Bonny Best—One of the best and most prolific of early tomatoes. The size is not so large, but it is very solid and evenly bright red. 1 oz., 25c.; ¼ lb., 85c.; 1 lb., \$3.50.

June Pink—New. Very early; of medium size, round, smooth and very solid. Color pink. Pkt., 10c.; 1 oz., 30c.; ¼ lb., 90c.; 1 lb., \$3.00.

New Stone—A great favorite with canners; the heaviest and most solid-fruited of the large Tomatoes of good quality. Our stock is distinctly superior to most of that offered under this name, being more uniform, better colored and larger. Fruit round, apple-shaped, very large, deep red, and astonishingly heavy. 1 oz., 35c.; ¼ lb., 90c.; 1 lb., \$3.25.

Marglobe—This new main-crop or mid-season tomato is a wilt-resistant variety bred for use in disease infected districts. In addition to being wilt-resistant, it is a handsome deep red globe shaped tomato of great merit. The plants are vigorous and productive and the fruits are quite large. In our trials they averaged 7½ ounces in weight. The flavor seems to be a happy medium between the acid and non-acid sorts. The shape and size of the fruits makes this a very desirable salad or slicing tomato and the color and quality seem ideally fitted for canning. Pkt., 10c.; oz., 40c.; ¼ lb., \$1.25; 1 lb., \$4.00.

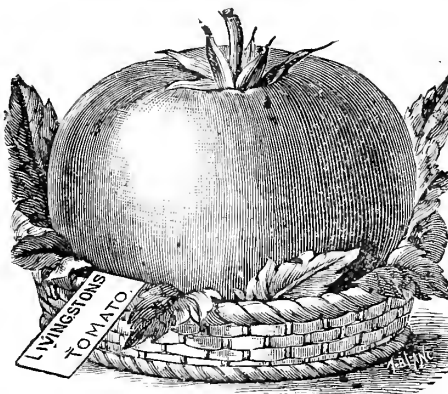

EARLIANA TOMATO

Ponderosa—Pkt., 10c.; 1 oz., 45c.; ¼ lb., \$1.50.

Matchless—One of the best main-crop sorts. Fruits very large, smooth, exceedingly solid and of a good red color. It is quite prolific and matures a little later than Stone. Pkt., 10c.; 1 oz., 25c.; ¼ lb., 85c.; 1 lb., \$3.00.

Yellow Plum—Oz., 45c.; ¼ lb., \$1.50.

Large Yellow Tomato—A good eating tomato. Oz., 40c.; ¼ lb., \$1.20.

TURNIPS

Three ounces of seed will sow 100 yards of row. Four pounds to the acre. Matures for table in from 60 to 90 days, according to variety and season.

Turnip seed may be sown when the Peach is in bloom, or among the first seeds in early spring; indeed, the only hope of a successful spring crop is in an early start, as otherwise the period of maturity extends into hot weather, when the bulb becomes fibrous and pungent.

EARLY RED TOP GLOBE TURNIP

Midsummer and early autumn are the seasons for successful Turnip drilling, though frequently the conditions of the soil then are not favorable to satisfactory vegetation.

The seed of Cattle Turnips is always drilled in rows, while the early maturing and surface-rooted table Turnip is generally sown broadcast. We advise the sowing, either in drills or broadcast, of not less than three pounds to the acre to insure a satisfactory stand.

The Bloomsdale Swede, like other Ruta-Bagas, is slower in growth than the rough leaved turnips, but produce roots more solid and more nutritious—less laxative and more fattening. The Ruta-Baga is a gross feeder and will do best with 20 to 25 tons of stable manure to the acre; when it cannot be obtained apply 500 pounds of super-phosphate.

Early Flat Red or Purple Top (Strap-leaved), 60 days—The oldest standard red. 1 oz., 10c.; ¼ lb., 20c.; 1 lb., 50c.

Bloomsdale Swede or Yellow Ruta-Baga (maturing in 90 days)—The Bloomsdale is quite wonderful in its fine breeding. In nothing that we offer are the effects in selection and in careful breeding so apparent as in this Ruta-Baga. Oz., 10c.; ¼ lb., 20c.; 1 lb., 50c.

Golden Ball—1 oz., 10c.; ¼ lb., 20c.; 1 lb., 65c.

Yellow Globe—A splendid sort for general crop; grows large, a good keeper, with bright yellow flesh. 1 oz., 10c.; ¼ lb., 20c.; 1 lb., 50c.

White Summer Turnip—1 oz., 10c.; ¼ lb., 20c.; 1 lb., 60c.

Amber Globe, Green Crowned, 75 Days—1 oz., 10c.; ¼ lb., 20c.; 1 lb., 50c.

Large Early Red Top Globe, 65 Days—Large size, rapid growth, unusually attractive and admired by all. A very much heavier producer than either of the preceding. We confidently recommend it. 1 oz., 10c.; ¼ lb., 20c.; 1 lb., 45c.

SATTERTHWAITE'S EVERGREEN LAWN SEED

Preparing for Planting

The first thing is to see that there is a good top soil of at least six inches. This should be graded and drained, if necessary. The ground should be thoroughly mellowed by digging. Then it should be raked and rolled. All stones and roots should be removed. Now the seed may be sown. It should be lightly raked in and then rolled. If the seed is sown in April and May it will make a good lawn by August.

The seeds in this mixture are the best tested seeds obtainable. They are full of vitality and will secure a lawn quicker than any other seed. Sow five bushels to an acre. Sow one quart to every two hundred square feet.

Actual figures prove that it pays to spray with Pyrox. Wherever this time-tested, well-known insecticide and fungicide has been used properly, better crops, larger yields and extra profits have resulted.

Mr. C. Walter Goff, of North Elba, attributed a gain of from 35 to 45 bushels of potatoes an acre to the use of Pyrox. He wrote us:

"I have completed my harvest of 1500 bushels of Certified Green Mountain seed potatoes and can truthfully say that I never had a cleaner yield of potatoes. I give Pyrox credit for this as my vines stayed green until killing frost and my inspection report on field was 100 per cent freedom from disease. In 1929 I used bordeaux and my vines died 20 days before frost. I found Pyrox very easy to mix, no clogging of nozzles and sticks through rain. I shall use Pyrox in 1932."

Pyrox wastes no time or labor. Simply mix with water according to directions and within five minutes you are ready to spray.

BOWKER'S STAPLE PRODUCTS

Powdered Arsenate of Lead: The result of 33 years of manufacturing this product—a longer experience than that of anyone else in the business. Bowker's can be used either as a spray or as a dust for all external-chewing insects. It will not burn or injure your crop. Unlike some brands, Bowker's mixes easily, stays well in suspension and is so finely divided that you get an even distribution, with no trouble from clogged nozzles. Sticks to the foliage through heaviest rains. In Bowker's you obtain unusual efficiency at no additional cost. Prices: 1 lb., 25c.; 4 lbs., 75c.; 25 lbs., \$4.00; 100 lbs., \$14.50.

Powdered Bordeaux Mixture: A powerful fungicide for the control of blights, rusts and rots on any crops where bordeaux is recommended by agricultural authorities. Fine, light and fluffy, Bowker's Bordeaux mixes easily and completely. Hence it covers evenly and sticks well to the foliage. When bugs or worms are present, use Bowker's Pyrox in place of bordeaux, as bordeaux contains no poison. Prices: 1 lb., 35c.; 4 lbs., \$1.00; 25 lbs., \$5.00; 100 lbs., \$19.00.

Dry and Liquid Lime Sulphur: Bowker's Dry Lime Sulphur is made by a special patented process which keeps the product in good physical condition, thus insuring its going into suspension quickly. Dry Lime Sulphur does not have some of the disagreeable features of the liquid and is now generally accepted by fruit growers everywhere. It is used as either a dormant spray to kill scale or as a summer spray to control fungous diseases such as scab, rot, etc. Prices: 1 lb., 30c.; 5 lbs., \$1.25; 12½ lbs., \$2.00; 25 lbs., \$4.00; 50 lbs., \$7.75; 100 lbs., \$13.50.

BOWKER'S LIQUID LIME SULPHUR, if used according to directions, will kill every scale that it touches. It is prepared from the highest grade of lime and the purest sulphur; combined in especially designed apparatus, and in quantities so large as to allow plenty of time for storage and settling. Thus the solution which reaches you is cherry red in color, clear and sparkling. It will not crystallize, thicken up in the barrel, or clog the finest nozzles.

Calcium Arsenate: is a powerful poison which kills potato bugs, bean beetles and other leaf-eating pests found among truck crops. It may be applied either wet or dry and is cheaper than Arsenate of Lead. 2 lbs. to 50 gals. of water or 1 lb. to 9 lbs. of Hydrated Lime. Prices: 1 lb., 20c.; 4 lbs., 75c.

Copper Lime Dusts:

These dusts have met with marked favor among the users of these products because of their exceptional quality. The quality is the result of long experience in their manufacture and a clear understanding of what constitutes quality in a dust.

The Philadelphia "21-inch" Motor Mower is a small-size, motor-driven machine that can be depended upon to do the work required.

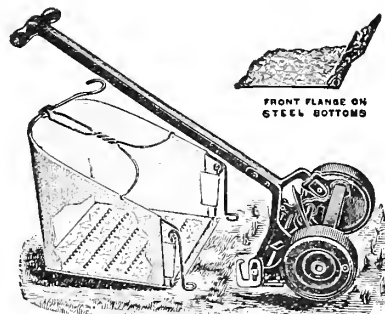

The cutting unit is constructed in the most up-to-date manner developed to accommodate the motor and withstand rough usage. The revolving cutter can be removed from the frame for re-grinding without disturbing any other parts.

The motor is a single-cylinder, air-cooled, four-cycle engine of ¾ to 1½ H.P. There are but two controls—one for the clutch and one for the gas. The magneto is self-contained in the fly-wheel.

This unit is, in our judgment, the most economical type of mower for lawns of from ½ to 3 acres.

The wide, pressed-steel wheels are unbreakable. The clutch is the most effective ever designed. It is guaranteed for materials and workmanship.

Conkey's, the Original Buttermilk Starting Feed. Millions of chicks might just as well have died in the shell, so far as profits are concerned! They have been fed unbalanced feeds which result in slow development of bone, muscle, and feathers. Many die from disease because of lack of vigor. All because of poor feed.
